**Call Forward Busy** - Automatically forwards incoming calls to a predetermined number when the called number is busy.

**Call Forwarding No Answer** - Automatically forwards all terminating calls to a predetermined number, if the called number does not answer in a predetermined time interval.

**Call Return** - Allows a customer to dial a code that will cause the feature to automatically redial the number of the last incoming call to that line, whether the call was answered or not. The customer does not have to know the number of the calling party. If the calling party's number is blocked by the calling party, the service will not return the call. If the called number is busy, the feature will redial the called number for a limited period of time. A tone alerts the customer when the called line is available.

**Call Trace** - Allows a called party to initiate an automatic trace of the last call received. Call Trace \*57 is available on a usage basis only. After receiving the call which is to be traced, the customer dials a code and the traced telephone number is automatically sent to the Company for further action. The customer originating the trace will not receive the traced telephone number. The results of a trace will be furnished only to legally constituted

law enforcement agencies or authorities upon proper request by them. The company is not liable for damages if, for any reason, the Call Trace \*57 attempt is not successful.

**Call Transfer Disconnect** – This service allows the subscriber to transfer an incoming call to any phone number.

**Complex Listings** – A business listing that includes a main heading and multiple phone numbers.

**Distinctive Ring** - Distinctive Ring provides a distinctive ringing code on incoming calls to an access line. This code is achieved by assigning an additional telephone number to the access line. Non-published Listing - An arrangement whereby a customer's listing is not available from the telephone directory or from directory assistance service.

**Hunting Line Number** – A phone number not associated with a telephone that initiates a hunting sequence to a group of phones.

**Remote Call Forwarding** - incoming calls are automatically routed to another customer selected telephone number in the local calling area or a distant exchange.

**Selective Call Rejection** - Enables a customer to reject call attempts from up to 32 numbers of calling parties by dialing a code and the telephone numbers of calls to be rejected. Any call attempts to the customer from these numbers will be prevented from terminating to the customer and will instead be connected to an announcement informing the caller that the call is not presently being accepted by the called party. A customer may also reject future calls from the most recent call received by dialing a code after completing the call.

**SimRing** - This service allows up to four telephones to ring at one time. When the call is picked up either by the Customer or voicemail, the other telephones stop ringing. At least one of the phone numbers must have service provided by Company.

**Three-way Calling** - A feature providing the capability to add a third party to an existing conversation

**vFax** - vFax is a virtual fax service. This service sends incoming faxes directly to one or multiple email addresses. The person sending the fax sends it to a ten-digit number like a traditional fax. However, instead of receiving it in paper form on a fax machine, it will show up in the Customer's email inbox.
